SCHEDULE 1

TECHNICAL AND ORGANIZATIONAL MEASURES

Introduction

Software Mansion employs a combination of policies, procedures, guidelines and technical and physical controls to protect the personal data it processes from accidental loss and unauthorised access, disclosure or destruction.

Governance and policies

Software Mansion:

- assigns personnel with responsibility for the determination, review and implementation of security policies and measures;
- reviews its security measures and policies on a regular basis to ensure they continue to be appropriate for the data being protected;
- establishes and follows secure configurations for systems and software, and ensures that security measures are considered during project initiation and the development of new IT systems.

Breach response

Software Mansion maintains internal monitoring systems that can alert its operational teams regarding any service outages.

Software Mansion has a breach response plan that has been developed to address data breach events.

Access controls

Software Mansion limits access to personal data by implementing appropriate access controls, including the following:

- Access to infrastructure and internal resources is managed on the basis of the Principle of Least Privilege: individuals are granted only the privileges they require to execute their business duties, and said privilege is revoked when it is no longer needed.
- Access management is centralized to identity providers, and wherever feasible, internal service delegate both authentication and authorization to these providers. This ensures that off-boarding and privilege revocation can be handled in a timely fashion.
- User Authentication for Software Mansion internal resources is protected with both a strong password policy, as well as mandatory 2FA.

- Software Mansion never knowingly stores plaintext passwords; if necessary, Software Mansion stores hashed, salted results of authentication material, as appropriate for the use-case.
- Traffic flow logs are retained that enable retroactive analysis of all connections to our infrastructure if needed.

Encryption

Stored data is encrypted where appropriate, including any backup copies of the data.

All network communication is conducted over encrypted links protected by modern security standards (TLS 1.2, modern ciphersuites) to preserve confidentiality and integrity of the data.

Availability and backup

Software Mansion takes daily backups of Customer projects by default. AAll backups are encrypted in-transit and at-rest.

Backups are stored on a storage system independent of the Customer's project resources.

Testing

Software Mansion uses reasonable and appropriate security and compliance monitoring systems across its infrastructure, in order to detect any violations of its security policies.
